Vehicle tracking

Highest quality of manufacture

The heart of the tracking system is the hardware device, or black box that is installed in your vehicle. There is no use buying a luxurious expensive vehicle and then risk damage to it by installing a cheap low quality electronic product which will be connected to your vehicle's wiring. From the ground up, the team of engineers has designed technically the strongest, most reliable, quality product so that you can trust the product safety and reliability. Our devices are locally manufactured at a fully ISO9001:2000 approved electronic manufacturing facility and using a solid audit trail from start to finish. All devices are actively tested, not just jig tested to ensure working product is always shipped.

Superior packaging

Enclosed in a rugged aluminium case has a number of advantages. Not only does it give a secure professional appearance but the shielding properties of the metal create a "faraday" cage around the modem, protecting it from RF signals which might disturb or jam the communication. The black powder coated finish is durable and makes the device easier to hide in a vehicle.

Saves directly to your PC

The Digit system is different to most competitor web-based systems. All vehicle trip data is stored on your local PC, so slow, frustrating internet browsing is a thing of the past. All you need to do is make a brief connection to the internet to download the tiny strings of position information to your local PC. Then all the trip processing, route building and vehicle data is stored for your immediate access. Viewing the data and compiling reports can be done completely offline. Not only will you save time and frustration, you will also save on 90% of your data costs.

Camera Systems

After many years of being a top innovator of fleet management systems, we can now offer video solutions as well. See the environment around your vehicles with 24hr surveillance, see that vehicles don't do illegal stops, pick up passengers or offload where they should not. With the ever present possibility of accidents, know where you stand in the event of liability claims. Live monitoring from anywhere in the world or use the proprietary software to post view and listen to recorded footage on your PC. Coupled with the Digit tracking service, you can easily find the footage you need instead of looking through hours of recorded data.

A camera for every angle

From reversing, to load area, all important areas should be covered

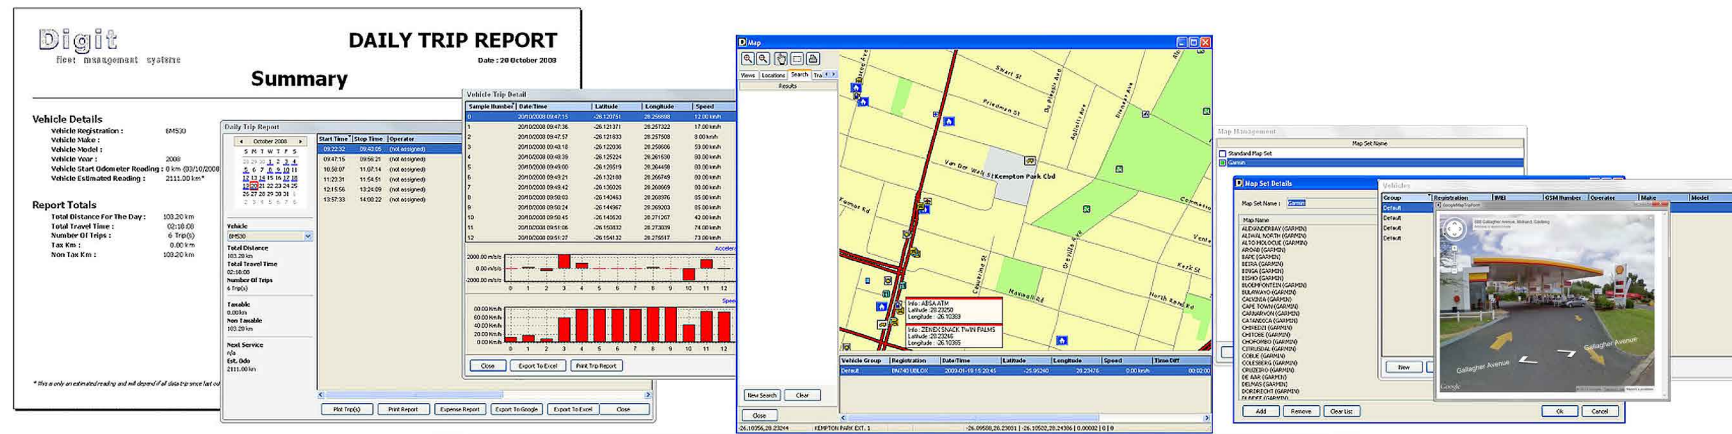

Mobile recorder

Use the latest MDVR technology to capture and store data. Retrieve the media for zero cost or enjoy live images via 3G

Seeing is believing

Intuitive simple software for viewing, exporting and sharing the images

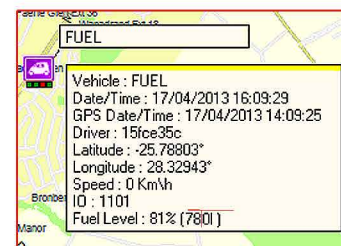

User friendly software that works

The software is designed to do it all for you, and with the easy to use button interface, accessing all the features, is now just a click away. All the trip information can be viewed as a list of events in a spreadsheet format, a series of graphs representing speed and acceleration or as a route on a map. Any report can be generated either using the custom reporting function or by exporting the data to an Excel spreadsheet. Limitless ability to add vehicle details, calculates fuel costs, log business mileage. The system will produce a full electronic log book that can be used for SARS tax claim purposes. Track driver activity and much more are all features of the easy to use software.

Verified live tracking

Knowing where your vehicles are, is key to your operational safety, efficiency and service offering. While other systems only represent the last known position, Digit will constantly confirm how old the data is, making you 100% sure that you are viewing real time positions. During live tracking one can view multiple vehicles and be notified of them leaving or entering predefined zones via on-screen alert or email.

Digit Porti

Digit Porti — is a Waterproof IP66 personal tracker suitable for People, Guards, Children, Assets, Pets and also parcels. With its easy to use features and rugged nature, the Porti is equipped with an SOS button. A person using the device is only one click away from calling the programmed numbers for help. This device can facilitate two-way communication along with the option to listen-in, which can be very helpful when discretely trying to locate a missing person. Give your loved ones peace a mind when they are traveling, hiking, camping, etc. Personal & vehicle tracking has never been easier. Lightweight and supplied with a rechargeable battery pack that lasts for up to a week depending on settings.
